

T-Lok[®] Barkwood

P R O • F I L E

Revolutionary T-Lok[™] Design

Mastic's T-lok[®] technology sets the standard for performance for locking siding. Its proven track record has earned a 30-year reputation as the most recommended siding among contractors. It delivers a positive locking action that assures panels hang straight, join tightly, and resist blow off, even in high winds.

.048" Thickness

Superior thickness and impact formulation provides 25% more impact resistance than standard .040" panels. T-lok Barkwood's sturdier, more rigid construction hangs straighter, conceals minor wall imperfections and delivers maintenance-free durability for years and years.

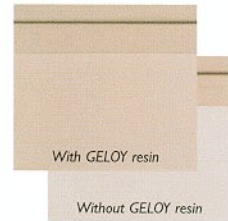

Exclusive Duranyl[®] Formula

Mastic's exclusive compound formulation enhances durability by making siding more resistant to cracking, impact, and thermal distortion. And Duranyl's color saturation process insures superior nick and scratch resistance.

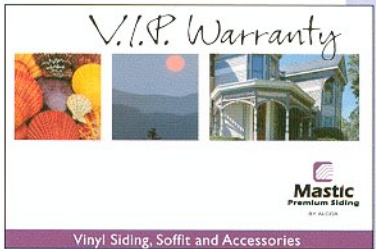

GELOY[®] Sun Protection

T-lok Barkwood uses GE Plastics' high-performance resin to add extra UV protection to our deepest, most vivid colors. The result protects the color, resists fading and maximizes long-term weatherability.

V.I.P. Warranty

There's more behind the Mastic name. Barkwood is backed by Alcoa, a name that inspires confidence. You'll get worry-free performance, long-lasting value, and beauty from an industry leader.
